

# **Population Survey Of The Javan Gibbon (Hylobates Moloch) At The Ujung Kulon National Park, West Java, Indonesia**

Entang Iskandar , Randall C. Kyes , Tri Wibowo

A population survey of the Javan gibbon (Hylobates moloch) was conducted between November and December 2000 in the Cibiuk region of Mount Honje in the Ujung Kulon National Park, located at the western tip of West Java. The goals of the project were to provide updated information on the status of the Javan gibbon population; to conduct a vegetation analysis of the gibbons' food sources; and to
