ABSTRACT. Study in correlation between economic pressure and coping mechanism and its impact to family welfare in peasant in Indonesia are still less likely to be done. The general objective of this research was to analyze the correlation between economic pressure, financial management, and coping mechanism with family welfare of plantation women workers. This was cross sectional study that involved 87 families of plantation women workers who had under-6 years old children as samples. The data which was collected in April 2008 consists of primary and secondary data. The primary data consists of economic pressure, financial management, and coping mechanism that taken by using structured questionnaire. Result of the research shows that there are significant correlation between family size with economic pressure and between economic pressure with family welfare. It means that the bigger family size, then higher level economic pressure, and then lower the level of family welfare. There are positive significant correlation between education level with financial management and between financial management with family welfare. There are also negative significant correlation between sample's age with subjective and objective economic pressure, and positive significant correlation between economic pressure with coping mechanism in reducing food and non-food expenditure.

Key words: coping mechanism, economic pressure, financial management, plantation women worker, family welfare

PENDAHULUAN

Indonesia dikenal sebagai negara agraris dimana persentase terbesar penduduknya masih bermata pencaharian sebagai petani. Sebagian besar petani adalah petani kecil yang berpendapatan rendah dan bertempat tinggal di pedesaan. Selain pemilik dan atau penggarap lahan sempit, buruh tani juga termasuk dalam kategori petani kecil. Pada umumnya penghasilan petani kecil (juga buruh tani) sangat rendah, sehingga tergolong ke dalam keluarga miskin. Oleh karenanya petani kecil di pedesaan menyumbang sebagian besar angka kemiskinan di pedesaan. Data BPS

(2007) menunjukkan bahwa angka kemiskinan pedesaan lebih besar dibandingkan di perkotaan.

Krisis ekonomi global melanda seluruh sektor usaha, tidak terkecuali sektor pertanian dan perkebunan. Dalam batas tertentu krisis tersebut berdampak terhadap permintaan dan harga hasil perkebunan, yang pada akhirnya akan berdampak terhadap volume pekerjaan buruh lepas seperti para pemetik teh, yang sebagian besar adalah perempuan. Volume pekerjaan yang terpengaruh adalah yang berkaitan dengan perawatan tanaman teh. Perempuan pemetik teh umumnya bekerja selama tujuh jam per hari untuk memperoleh penghasilan
