Bogor Agricultural University
Bogor, Indonesia

Welcome Message from The General Chairs of ICAIA 2015

On behalf of the organizing committee, it is our pleasure to welcome you to International Conference on Adaptive and Intelligent Agroindustry, Bogor, Indonesia. This is the 3rd conference on the topic that is held by the Department of Agroindustrial Technology, Bogor Agricultural University, Indonesia.

The conference is expected to provide excellent opportunity to meet experts, to exchange information, and to strengthen the collaboration among researchers, engineers, and scholars from academia, government, and industry. In addition, the conference committee invited five renowned keynote speakers, i.e. Prof Irawadi from Bogor Agricultural University; Prof Kenneth De Jong from George Mason University, USA; Dr Yandra Arkeman from Bogor Agricultural University; and Dr Guillermo Baigorria from University of Nebraska-Lincoln, USA.

The conference committee also invited Prof Noel Lindsay from University of Adelaide, Australia; Kiyotada Hayashi from National Agricultural Research Center-Tsukuba, Japan; Prof Margareth Gfrerer from Islamic State University of Jakarta, Indonesia; Dr Barry Eley from University of Adelaide, Australia; Dr Gajendran Kandasamy from Melbourne University, Australia; and Imperial College London-British, Prof Allan O'Connor from University of Adelaide, Australia; Dr Wisnu Ananta Kusuma from Bogor Agricultural University, Indonesia; and Dr Frank Neumann from University of Adelaide, Australia, as invited speakers.

This conference was organized by Department of Agroindustrial Technology, Bogor Agricultural University and Asosiasi Agroindustri Indonesia, and technically sponsored by IEEE Indonesia Section. Furthermore, it was supported by Department of Computer Science, Bogor Agricultural University; Surfactant and Bionergy Research Center; PT Bogor Life Science and Technology; Indonesian Ministry of Industry; PT Pachira Distrinusa; and PT Kelola Mina Laut.

I would like to take this opportunity to express my deep appreciation to the conference's committee members for their hard work and contribution throughout this conference. I would like to thank authors, reviewers, speakers, and session chairs for their support to participate in the Conference. Lastly, I would like to welcome you to join ICAIA 2015 and wish you all an enjoyable stay in Bogor.

Sincerely,
Dr Yandra Arkeman
General Chairs, ICAIA 2015

WELCOMING ADDRESS

Prof. Dr. Ir. Nastiti Siswi Indrasti

Head of Agroindustrial Technology Department
Faculty of Agricultural Engineering and Technology
Bogor Agricultural University

on

**3rd International Conference on Adaptive and Intelligence Agroindustry (3rd
ICAIA)**

Bogor, August, 3 – 4, 2015

Assalamu'alaikum Warohmatullahi Wabarokatuh
In the name of Allah, the beneficent and the merciful,

Distinguish Guest, Ladies and Gentlemen

Let me first thank you all for accepting the invitation to participate in this 3rd International Conference on Adaptive and Intelligence Agroindustry (ICAIA). In particular I would like to thank Rector of IPB (Institut Pertanian Bogor/Bogor Agricultural University) Prof. Herry Suhardiyanto for supporting this event as part of the series academic event in celebrating the 52nd Anniversary of Bogor Agricultural University.

We are certainly proud to have been able to assemble this event in IPB, Bogor. The range of participants and audience at this conference is precisely something I would like to stress. Participants who followed the event more than 150 people, coming from various countries including the USA, Australia, Japan, Vietnam, Philippine, Germany and Indonesia. The main goal of the conference is to provide an effective forum for distinguished speakers, academicians, professional and practitioners coming from universities, research institutions, government agencies and industries to share or exchange their ideas, experience and recent progress in Adaptive and Intelligent Agroindustry.

The 2015 3rd International Conference on Adaptive and Intelligent Agro-industry (ICAIA) is the third forum for the presentation of new advances and research results on various topics in all aspects of innovative agro-industry that highlights the development and improvement for today and tomorrow's global need for food, energy, water and medicine. The aim of the conference is to stimulate interaction and cohesiveness among researchers in the vast areas of innovative agro-industry. Innovative Agro-industry has the ability to adapt intelligently to future global challenges, i.e. food, energy, water, and medical. Global challenges needs a new breed of Agroindustry which could produce innovative products to fulfill the needs through advanced processing technology, production systems and business strategy supported by cutting-edge information and communication technology.

The topic for this event is "Empowering Innovative Agroindustry for Natural Resources, Bioenergy and Food Sovereignty". The topics clustered into four main parts:

Track 1 : Innovative Agroindustrial and Business System Engineering

Track 2 : Frontier Approaches in Process and Bioprocess Engineering
Track 3 : Frontier Approaches in Industrial Environmental Engineering
Track 4 : Intelligent Information and Communication Technology for Adaptive
Agroindustry of the Future

This event also hosts four (4) workshops: (1) Strategies for Agroindustry Development (2) LCA for Agroindustry (3) Innovation and Technopreneurship for Agroindustry and (4) Agroindustry Informatics.

Distinguish Guest, Ladies and Gentlement,

Agroindustry transforms agricultural commodities into high value-added products. Agroindustry is industry that process agricultural products to increase their value added significantly by using technology and by considering environmental aspect and sustainability. However, with changing global demand and technology advancement, innovative agroindustry is needed in order to be competitive as well as sustainable. The challenge of future agroindustry is not merely efficiency and productivity anymore, but also the challenge to appropriately apply frontier technology as well as meeting future global demands.

Agroindustry needs to deal with the application of advance technologies and cope future global issues. Current global issues which arise and expected to exist in the future are food sovereignty, renewable energy, sustainable water management and pharmacy. The ability of agro-industry to respond the future global issues and the undoubtedly substantial increase in demand in future decades will be highly dependent on the increased application of existing technologies as well as the exploitation of new and innovative technologies.

The emergence of high technology could be applied in the agro-industry are: nanotechnology, biotechnology, bioinformatics, food processing, food packaging-waste, state-of-the-art computation and many others. The aforementioned high-technology along with computation technology could greatly advance agro-industry from a traditional system into a smart-intelligent and innovative technology. Therefore, in the new millennia, adaptive-intelligent and innovative agro-industry will contribute to solutions to global problems and brings agriculture into perfection.

Hope this conference will also discuss this issue in more detail as it is an important matter for all of us. We should no more think just how to produce high value product but it is also necessarily important how to keep our live in good quality by understanding following old saying... "You do not live at once. You only die once and live every day".

I do not to take up any more of your time with these opening remarks. Let me simply thank you once again for sharing your thoughts with us. Here's wishing every success for the conference. May Allah bless all of us.

Thank you for your kind attention,
Wassalamu'alaikum Warohmatullahi Wabarokatuh

15.45 – 16.15	Closing remark

TABLE OF CONTENTS

Welcoming address from general chairs	i
Welcoming address from head of Agroindustrial Technology Departement Bogor Agricultural University Committee	ii
Agenda	iv
Table of Content	v
Abstract of Invited Speakers	
Noel Lindsay	1
Kiyotada Hayashi	2
Barry Elsey	3
Frank Neumann	4
Yandra Arkeman	5
Wisnu Ananta Kusuma	6
Innovative Agroindustrial and Business System Engineering	
The Feasibility Study of Establishment of Biodiesel And Paving Block Industry From Spent Bleaching Earth Febriani Purba, Ani Suryani and Sukardi	7
Green Supply Chain Management Innovation Diffusion in Crumb Rubber Factories: Designing Strategies towards Implementation Tri Susanto, Marimin Marimin and Suprihatin	13
Mobile Business Analytics System for Service Level Analysis of Customer Relationship Decision Taufik Djatna and Yudhistira Chandra Bayu	19
Exploring an Innovative Approach to Address Non-Tariff Barriers Experienced by Small to Medium Enterprises in Downstream Coffee Production in Indonesia Andar Hermawan, Yandra Arkeman, Titi Candra Sunarti	26
Innovation on Guardrail Press Tool with Simple Technology for Highway Road Business Bambang Suhardi Waluyo and M.Syamsul Ma'Arif	33
An Analysis of Innovation Network Performance on the Palm Oil Industry in North Sumatera Danang Krisna Yudha, Aji Hermawan and Machfud	34
Application of Nanotechnology to Improve Physical Properties of Red Fruit Emulsion in order to Increase Its Industrial Use Murti Ningrum and Syamsul Maarif	41
Exploring the Internationalization Process Model of an Indonesian Product – Case study : Fruit Chips SME's Dickie Sulistya Apriliyanto, Hartrisari Hardjomidjojo, Titi C Sunarti	47
Innovation Management in Indonesian Palm Oil Industry Karim Abdullah, Aji Hermawan and Yandra Arkeman	53

Innovation Design Process for Gayo's Coffee Quality Improvement Rahmat Pramulya, M Syamsul Ma'Arif and Tajuddin Bantacut	59
Technology Innovation Adoption to Improve the Performance of Dairy Small-Medium Enterprises (SME): Case study in Pangalengan-Bandung Regency, West Java, Indonesia Nuni Novitasari, Titi Candra Sunarti and Nastiti Siwi Indrasti	67
Process Innovation for Producing Bioethanol from Oil Palm Empty Fruit Bunches by Improving Fermentation Conditions Fitriani Kasim, Novizar Nazir and Syamsul Ma'Arif	76
Managing Innovation through Knowledge Sharing in An Indonesia Coconut SME Muchammad Kodiyat P, Machfud, Nastiti S Indrasti	82
Increasing Added Value of Banana by Producing Synbiotic Banana "Sale" Using Innovation & Technology Strategy Approach Eka Ruriani	88
Innovation Palm Fronds Briquettes Through Noncarbonization Process Petir Papilo, Syamsul Ma'Arif and Yandra Arkeman	93
Graphic Design Innovation As Brand Identity For "Mahlzeit N 'Das Brot " Bread Packaging Zulkarnain, Deny Dwi Lestari and M. Syamsul Ma'Arif	100
An AHP Application for Selecting A Business Innovation Strategy of Chocolate SMEs in East Java Yani Kartika Pertiwi, M. Syamsul Maarif and Machfud	104
Understanding local food consumers and their motivations: A case study in Padang city Poppy Arsil	110
Spatial Model Design for Competitive Improvement of Small Medium Scales Enterprises (Case Study: Bogor City) Hartrisari Hardjomidjojo, Harry Imantho and Armaiki Yusmur	116
System Analysis and Design for Selecting Chitin and Chitosan Industry Location by Using Comparative Performance Index (CPI) Method Dena Sismaraini, Nastiti S. Indrasti and Taufik Djatna	121
Arduino-Based Temperature Monitoring Device for Cold Chain Transportation Delmar Zakaria Firdaus and Endang Warsiki	129
Development of Downstream Cocoa Industry: Exploring the Role of Government and Small and Medium Industry in Partnership Farda Eka Kusumawardana, Yandra Arkeman, Titi C Sunarti	134
The Role of Communication in the Technology Transfer (A Case Study at the Center for Agro-based Industry) Anindita Dibyono, Sukardi, Machfud	140
The Center for Pulp and Paper Appraising its Productivity in Generating Industry-Applicable Research: A Best Practice Illustration Ahmad Rudh Firdausi, Anas M Fauzi, Machfud	147
Frontier Approaches in Process and Bioprocess Engineering Identification of Flavor Compounds In Cemcem (<i>Spondiazpinata</i> (L.F) Kurz) Leaf Extra	156

Luh Putu Wrasiasi, Ni Made Wartini and Ni Putu Eny Sulistyadewi Synthesis and Characterization of Nanosilica from Boiler Ash with Co- Precipitation Method	160
Wahyu Kamal Setiawan, Nastiti Siswi Indrasti and Suprihatin The Comparison Of Media on the Microalgae <i>Nannochloropsis</i> sp. Culture Anak Agung Made Dewi Anggreni, I Wayan Arnata and I B Wayan Gunam	165
Identification of Media and Indicator Liquid as A Recorder Smart Label Endang Warsiki and Riris Octaviasari	169
The Effect of Consentration of Mes Surfactant From Palm Oil and Consentrasion of Inorganic Salt to Interfacial Tension Value Rista Fitria, Ani Suryani, Mira Rivai and Ari Imam	174
Effect of Nano Zinc Oxide On Bionanocomposite Siti Agustina, Nastiti Siswi Indrasti, Suprihatin and Nurul Taufiqu Rohman	180
The Effects of Molar Ratio Between 80% Glycerol And Palm Oil Oleic Acid on the Synthesis Process of Ester Glycerol Mira Rivai, Erliza Hambali, Giovanni Nurpratiwi Putri, Ani Suryani, Pudji Permadi, Bonar T.H Marbun and Ari Imam Sutanto	186
Selecting Part of Natural Fiber EFB which has Best Mechanical Strength through Tensile Test Analysis for Composite Reinforced Material Farkhan, Yohanes Aris Purwanto, Erliza Hambali and Wawan Hermawan	192
Effect Of Ethyl Methane Sulfonate (EMS) On Growth Rate, Cell Size, Fatty Acid Content And Antioxidant Activities Of <i>Dunaliella</i> sp. Mujizat Kawaroe and Amelia Gustini	199
Identification of phenol red as <i>Staphylococcus aureus</i> indicator label <i>Dunaliella</i> sp. Melati Pratama, Endang Warsiki and Liesbetini Hartoto	206
Enhancing Ethanol Tolerant of <i>Escherichia coli</i> Recombinant by Glutamate Addition under Aerobic Conditions Indra Kurniawan Saputra, Prayoga Suryadarma and Ari Permana Putra	211
In Vitro Potentifal of Antibacterial Marine Microalgae Extract <i>Chaetoceros gracilis</i> Toward <i>Staphylococcus epidermidis</i> Bacteria Ardhi Novrialdi Ginting, Liesbetini Haditjaroko and Iriani Setyaningsih	216
The Potential Applications of Modified Nagara Bean Flour through Fermentation for Innovation of High Protein Analog Rice Susi, Lya Agustina and Chondro Wibowo	221
Studies on the Characteristics of Pasayu (Pasta of Waste-Cassava) Fortification as a New Product Development Marleen Sunyoto, Roni Kastaman, Tati Nurmala and Dedi Muhtadi	226
Optical And Particle Size Properties Of <i>Sargassum</i> Sp Chlorophyll As Dye- Sensitized Solar Cell (DSSC) Makkulawu Andi Ridwan and Erliza Noor	234
Alkaline Pre-Treatment of <i>Gelidium latifolium</i> and <i>Caulerpa racemosa</i> for Bioethanol Production	239

Abstract

Staphylococcus aureus is one microorganism which caused food-borne disease. This bacteria contamination is very easy due to it exists in air, dust and contaminated equipment. Food contamination can occur during or after handling process such as on meat products, chicken, milk, fermented food items, vegetables, fish products and etc. The bacteria can cause food poisoning, so it is necessary to detect the growth of this bacteria in the food and food product before it is consumed. *Staphylococcus aureus* on food products can be detected using label indicator by the label color changing. The label was attached inside the food package. Many potential media can be used as label material. One of them is mannitol salt agar (MSA). MSA can give information *Staphylococcus aureus* growth on product by color changing from red to orange and yellow. This changing is irreversible. The color changing occur due to volatile acid and mannitol fermentation on MSA by *Staphylococcus aureus* result on pH reducing of the media, and then, once it will change *phenol red* color containing in MSA turn to orange and then yellow. The objective of research was to identify MSA media as *Staphylococcus aureus* detection label. The examination was conducted on petri dish approximately 2 cm from *Staphylococcus aureus* culture. The capability of label on detection *Staphylococcus aureus* growth was starting from 516 per gram of colony. The color change from red (R (red) 55, G (Green) 44 dan B (Blue) 41) to orange (R (red) 47, G (Green) 38 dan B (Blue) 34).

Key word : *Staphylococcus aureus*, color indicator, mannitol salt agar (MSA)

1. Introduction

Smart or intelligent packaging is a package that monitors the condition of the packed food to provide information about the quality during storage, transportation and distribution (Kuswandi *et al* 2011). The intelligent systems monitors the quality of the food product or its surrounding environment to predict or measure the safe shelf-life better than a best-before-date (Jong *et al* 2005). Some of smart or intelligent packaging have conducted such as smart packaging of erpa indicator (Nofrida *et al* 2013), smart packaging of natural or synthetic color (Warsiki and putri 2012), smart packaging of

monitoring fishery spoilage (Pacquit *et al* 2007), smart packaging to monitor spoilage (Napwinyouwong *et al* 2010). Smart or intelligent packaging was being developed is color indicator to detect pathogen bacteria. Smart or intelligent packaging use label that can give information about microbial growth by color change. Label color will change as a result of the reaction between color compound in label to bacteria metabolites produced. This kind of label is potential to be applied for meat and meat product which spoil sensitive to microbial growth such as *Staphylococcus aureus*.

Staphylococcus aureus is Gram positif bacteria. It survivals at low aw (0.83 to 0.86), high salt concentrations up to 20%, and within a wide pH (from 4 to 10, with an optimum of 6 to 7), and temperature range (6 to 48,5°C, with an optimum of 35 to 41°C). That characteristic cause *Staphylococcus aureus* easy to growth in all of conditions. Growth of *Staphylococcus aureus* on food products can be detected using label indicator by the label color changing. The label was attached inside the food package.

Many potential media can be used as label material. One of them is mannitol salt agar (MSA). MSA is selective media and differential to *Staphylococcus aureus* growth. MSA contain *phenol red* as color indicator, mannitol and protein that to be nutrition of *staphylococcus aureus* growth. MSA also contain high salt concentration so can inhibit other microbial growth (Kateete *et al* 2007). *Phenol red* can change MSA color from red (alkali) to yellow (acid) due to pH change. The ability of color change MSA needs to be examined in its ability to detect pathogen microbial.

This paper used MSA as label component which was tested in *staphylococcus aureus* culture TSA (*tryptone soya agar*) medium by using MSA as pathogen indicator. This label will detect base in decrease of pH due volatile metabolite gas that produced by *staphylococcus aureus* and label contaminated by *staphylococcus aureus* so mannitol label fermented to acid, and then change the color of label.

2. Material and Method

2.1. Material

Material was mannitol salt agar (MSA) as label material, *tryptone soya agar* (TSA) as inoculant medium and *Staphylococcus aureus* isolate at 3.10^5 -

3.10⁸ concentration. Isolate made by dilution method base on McFarland 1 standard.

2.2. Method

2.2.1. Phenol red label producing

Label was produced by dissolving 27.75 g mannitol salt agar into 250 mL aquadest, then it was heated at 50°C until 90°C. Then it was sterilized at 121°C for 15 minutes, cooled and formed 2 cm × 3 cm size. There were two different treatment of the label i.e. packed and unpacked. Packed label was done by inserted the pieces of label into LDPE (*low density polyethylene*) plastic and sealed. Before it is used, label was sterilized by UV for 15 minutes to get phenol label indicator free from contamination. Packed and unpacked label were then ready to be tested further.

2.2.2. Phenol red label testing

Phenol red label was attached inside the petri dish lid. Each petri dish has *staphylococcus aureus* by various concentration. The distance between label and inoculants was ± 2 cm. Petri dish was storage at room temperature for 2 days, and the color change of the label and

3. Result and discussion

Below was the result of *phenol red* label testing. It can be seen that the color of the label was gradually changing (Table 1. and Tabel 2. for unpacked label, Table 3. and Table 4. for packed label).

2.2.3. Color label measuring

Measuring of color was done by color analyzer RGB 1002. Sensors was placed on the label surface and the measuring was done 3 replicates. The number that appears on the screen was recorded as result of measurement.

2.2.4. Staphylococcus aureus number determination

Staphylococcus aureus grow in TSA was white round and then it was measured.

Table 1. Color change of label unpacked to amount *staphylococcus aureus* growth

	0 hour	3 hours	7 hours	11 hours	15 hours	31 hours
MSA5 control	0	0	171	532	TBUD	TBUD
L5	0	40	53	160	302	TBUD
MSA6 control	0	0	0	113	258	1068
L6	0	48	75	108	320	452
MSA7 control	0	0	0	132	201	592
L7	0	15	18	63	189	304
MSA8 Control	0	0	0	4	173	372
L8	0	0	8	12	98	106

note : L (label), 5 (dilution of 10⁵), 6 (dilution of 10⁶), 7 (dilution of 10⁷), 8 (dilution of 10⁸), TBUD (can not calculated)

Based on result that color label change from value of color changing was 30 (R), 94 (G) and 64 (B) red to yellow. The color changing was shown at label to 76(R), 70 (G) and 52(B) and clearly read from *staphylococcus aureus* from 302 to more 592. The Table 2.

RGB is an abbreviation for Red-Green-Blue. RGB is a base color for color combination (Saini dan Chan 2013, Binnar *et al* 2014). The value of combination for red and green produce yellow (Nishad dan Chezian 2013). The result show that the increase in red value (R) and green (G) occurring at 31 hours. The color change to yellow due to reaction between *phenol red* and metabolite produced by *staphylococcus aureus*. *Phenol red* is one of indicator color, it usually used to quantitative analysis. *Phenol red* has red color at alkali (pH 8.0) and yellow at acid (pH 6.6). The color will change, if the condition change to acid or alkali. The color change mechanism

of *phenol red* label are by volatile and mannitol fermentation.

The volatile was produced by *Staphylococcus aureus* on TSA. TSA (*tryptone soya agar*) is a general medium which contain casein pepton and soya peptone that carbon, nitrogen, vitamins and minerals source to *staphylococcus aureus* growth. Casein pepton contains high tryptophan, while soya pepton contains polypeptide, dipeptide and others amino acid (Bahri *et al* 2009). Casein and amino acid was breakdown by *staphylococcus aureus* to acetic acid volatile,

dimethyl sulfide and methanitol (Carbonero *et al* 2012, Filipiak *et al* 2012). Volatile compounds binding *phenol red* molecule on label so it changes character of *phenol red* to yellow. Ability of label to detect *staphylococcus aureus* affected by amount of *staphylococcus aureus* growth in media.

Mannitol fermentation happen, when *Staphylococcus aureus* contaminate label. *Staphylococcus aureus* grow in label, it fermented mannitol to acid in label. Acid changed pH label, then pH change color of *phenol red*.

Label unpacked has detection ability from *s.aureus* at 302, while label packed at 516. It was caused by the barrier between volatile compounds or bacteria and label. Label packed use LDPE (*low density poly ethylene*) as its packaging. Packaging use in label to prevent contamination for product due to label. Pore size of LDPE about 1.4 μm (Wendorf *et al* 1999), while size of volatile gas about 0.1-1nm and *Staphylococcus aureus* 1 μm (1000 nm). It causes plastic used can be penetrated by volatile gas and *Staphylococcus aureus*.

4. Conclusion

MSA (mannitol salt agar) is one of selective medium to microbe identification, it contains *phenol red* can used as label indicator. The color change label mechanism by volatile and acid from mannitol fermentation. Volatile and acid react with *phenol red* in MSA. Using LDPE as label packed can be used to detection *staphylococcus aureus*. The application, label can applicated to *staphylococcus aureus* easy contamination product by.

5. Suggestion

The weakness of label is label composition have not been halal or not halal for muslim to application in food, so it needs new halal formulation which can work base on MSA (mannitol salt agar) work principle.
