## STATEMENT REGARDING THESIS AND INFORMATION SOURCES AND COPYRIGHT RIGHTS

I hereby declare that the thesis entitled “The Effect of Acidification and Pasteurization on Shelf-Life of Vacuum-Packaged Tempe in Room Temperature” is my work under the guidance of my supervisor and has not been submitted in any form to any university. Sources of information originating or quoted from published or unpublished works from other authors have been mentioned in the text and listed in the Bibliography at the end of this thesis.

I hereby assign the copyright of my written work to the Bogor Agricultural Institute.

## ABSTRAK

CAROLINA ASIMA SIMAMORA. Pengaruh Pengasaman dan Pasteurisasi terhadap Umur Simpan Tempe Dikemas Vakum pada Suhu Ruang. Dibimbing oleh SUGIYONO.

Tempe merupakan produk kedelai fermentasi tradisional Indonesia yang memiliki kandungan protein tinggi dan biaya produksi yang rendah. Meskipun memiliki nilai gizi yang baik, tempe hanya dapat bertahan sekitar dua hari pada suhu ruang, yang membatasi distribusinya. Penelitian ini bertujuan memperpanjang umur simpan tempe melalui penerapan teknologi rintangan, dengan menggabungkan pengasaman, kemasan vakum, dan pasteurisasi. Penelitian ini dibagi menjadi tiga tahapan, yaitu pengasaman tempe (perendaman dalam larutan glucono delta lactone 6% selama 90 dan 105 menit), pasteurisasi tempe yang telah diasamkan dan dikemas vakum (suhu 80°C selama 20 dan 25 menit), dan penyimpanan tempe pasteurisasi pada suhu ruang selama 8 hari. Selama penyimpanan, dilakukan pengamatan dengan interval 2 hari terhadap pH, kekerasan, angka lempeng total (ALT), dan atribut sensori melalui uji hedonik. Pengasaman menyebabkan penurunan pH tempe menjadi  $4.47 \pm 0.07$  (90 menit perendaman) dan  $4.67 \pm 0.32$  (105 menit perendaman). Tidak ada perbedaan nyata antara kedua waktu perendaman. Tempe yang telah diasamkan masih dapat diterima secara sensori sehingga perendaman tempe tersingkat dipilih untuk tahapan selanjutnya. Pasteurisasi tempe selama 20 menit dan 25 menit menghasilkan nilai pasteurisasi masing-masing 3.8 menit dan 9.4 menit yang setara dengan reduksi jumlah bakteri *Bacillus subtilis* sebesar 1.2 log dan 3.1 log. Selama penyimpanan, tempe pasteurisasi tidak mengalami perubahan nyata pada pH, kekerasan, dan ALT. Hasil ini menunjukkan bahwa kedua tempe pasteurisasi stabil selama masa penyimpanan. Berdasarkan hasil uji hedonik, tempe yang telah mengalami perlakuan pengasaman dan pasteurisasi memiliki umur simpan hingga 6 hari pada suhu ruang (umur simpan tempe kontrol hanya 2 hari).

Kata kunci: evaluasi sensori, pasteurisasi tempe, pengasaman, suhu ruang, umur simpan

## ABSTRACT

CAROLINA ASIMA SIMAMORA. The Effect of Acidification and Pasteurization on Shelf-Life of Vacuum-Packaged Tempe at Room Temperature. Supervised by SUGIYONO.

Tempe is a traditional Indonesian fermented soybean product characterized by its high protein content and relatively low production cost. Despite its notable nutritional value, fresh tempe has a very limited shelf life of approximately two days at room temperature, which poses a significant challenge to its wider distribution and commercialization. This study aimed to extend the shelf life of tempe through the application of hurdle technology, combining three preservation methods, which were acidification, vacuum packaging, and pasteurization. The study was divided into three stages: tempe acidification (immersion in a 6% glucono delta lactone solution for 90 and 105 minutes), pasteurization of the acidified and vacuum-packaged tempe (80°C for 20 and 25 minutes), and storage of the pasteurized tempe at room temperature for 8 days. During storage, observations were conducted at 2-day intervals to measure pH, hardness, total plate count (TPC), and sensory attributes by hedonic testing. Acidification decreased the tempe pH to  $4.47 \pm 0.07$  (90-minute immersion) and  $4.67 \pm 0.32$  (105-minute immersion). No significant differences were found between the two immersion durations. The acidified tempe remained sensorially acceptable; therefore, the shortest immersion was selected to proceed to the next stage. Pasteurization for 20 and 25 minutes yielded pasteurization values of 3.8 minutes and 9.4 minutes, equivalent to a reduction in *Bacillus subtilis* counts of 1.2log and 3.1log cycles, respectively. During storage, the pasteurized tempe showed no significant changes in pH, hardness, or TPC, indicating that both pasteurized tempe remained stable throughout the storage period. Based on the hedonic test, tempe that underwent acidification and pasteurization treatment had a shelf life up to 6 days, compared to only 2 days for the control tempe, at room temperature.

**Keywords:** acidification, room temperature, pasteurized tempe, sensory evaluation, shelf life

## PREFACE

Praise and gratitude are sincerely offered to God Almighty for His endless blessings, guidance, and grace, which enabled the author to complete this undergraduate thesis successfully. This undergraduate thesis, entitled “The Effect of Acidification and Pasteurization on Shelf-Life of Vacuum-Packaged Tempe at Room Temperature,” was conducted from October 2025 to April 2026. In completing this undergraduate thesis, the author realized that many people have provided invaluable support, guidance, and contributions. Therefore, with sincere gratitude, the author would like to express the deepest gratitude to:

1. Prof. Dr. Ir. Sugiyono, M.App.Sc., as the academic advisor and undergraduate thesis supervisor, who has consistently provided guidance and valuable advice throughout the preparation and completion of this undergraduate thesis.
2. Dr. Faleh Setia Budi, S.T., M.T. and Prof. Dr. Ir. Dede Robiatul Adawiyah, M.Si for their willingness to serve as examiners for my thesis, who have valuable advice and constructive feedback which greatly contributed to the improvement of my thesis.
3. All laboratory technicians of the Food Technology Laboratory for their assistance in providing facilities and technical guidance throughout this research.
4. The author’s family, Bapak, Mamak, and beloved siblings, for their endless prayers, unconditional support, and love throughout the author’s academic journey.
5. Nurul Inayah, as the author’s research partner from the very beginning, for the thoughtful discussions, collaborative planning, and shared effort in processing the data together.
6. All hedonic test panelists who willingly participated and dedicated their time to be part of this research journey.
7. Nanda Duha, Kezia Santa Deby Silitonga, and Luat Rumapea, as the author’s closest friends, who have always been a place to share stories, express struggles, and exchange thoughts, as well as a constant source of laughter and encouragement.
8. Bunga ni Huria (Kezia, Luat, Nanda, Michelle, Rori, Tora, Moses, Farel, Jopas), No. Pecah (Luat, Cathleen, Ani), Alya Meirina, and Khalisa Ayu Larasati, for their support, prayers, and assistance throughout the author’s studies and the completion of this undergraduate thesis.
9. Agria Swara, PMK, and “Eternal” ITP 59, whose members are too many to mention individually, for the togetherness, shared experiences, and memorable moments throughout the author’s academic years.

The author acknowledges that this undergraduate thesis may still contain limitations. Therefore, constructive suggestion for future improvement are sincerely welcomed. Its is hoped that this research may provide benefits and contribute positively to the development of knowledge in the relevant field.

Bogor, June 2026
