ABSTRACT

Based on the Local Government Regulation No.5 Year 2010 regarding Regional Medium-Term Development Plan (RPJMD) in 2010-2014, the Government of Bogor Municipality has established a clear objective: to create Bogor as a leading city in the services sector, particularly in the trade sector. In order to achieve this objective, responsibility is not solely delegated to the Industry and Trade Agency, but should also be shared among other agencies, especially those responsible for improving local economic development, such as the office of cooperatives and SMEs, and agriculture agency. Hence, it is necessary a synergy of government planning encompassing each government agency, particularly in the agricultural, industrial, SME and trade sectors. In addition, performance indicators of government planning should be outcome-oriented in order to measure the degree to which the objectives as stated in RPJMD Kota Bogor in 2010-2014 are being achieved.
