Abstract

Kyai Langgeng Park located in Magelang City, is one of prime tourist destinations in Central Java Province. Current utilizations of Kyai Langgeng Park which occupies an area 27.05 ha are for arboretum, theme park, and orchid garden. The orchid garden is going to be developed as a tourism object. The existing condition of this 8,459.5 m² orchid garden is orchid nursery with green houses, lodging house, wooden vegetation, and footpath. The objective of this study is to provide landscape plan for the orchid garden to become tourism object by considering its physical and tourism aspect. Method to be applied in this landscape planning study is descriptive and spatial analysis by following planning process of Gold (1980). The process consisted of preparation, inventory, analysis, synthesis, concept, and planning. Based on spatial analysis of the biophysical aspects results three areas with the potential for tourism development in the orchid garden. The three areas consist of areas with high intensity, medium, and low for tourism development. This basic concept of the tourism planning is educative and recreative tourism of orchid garden. The basic concept is developed into spatial plan, circulation plan, vegetation plan, tourism activities and facilities plan. The output of this study is site plan.
