Wiley InterScience® now hosts over hosts over 1400 journals, including all titles formerly offered on Blackwell Synergy. This extensive archive makes Wiley InterScience® one of the world's premiere web portals for scientific, technical, medical, and scholarly content.

Table of contents and article abstracts are freely available online for all journals. Access to full-text articles and references is generally restricted to licensed subscriber or pay-per-view customers—however many journals offer open access to select sponsored or backfile content.

Journals on Wiley InterScience® are grouped under these main subject areas:

- Business, Economics, Finance and Accounting
- Chemistry
- Earth and Environmental Science
- Education
- Engineering
- Humanities and Social Sciences
- Information Science and Computing
- Law and Criminology
- Life Sciences
- Mathematics and Statistics
- Medical, Veterinary and Health Sciences
- Physics and Astronomy
- Polymers and Materials Science
- Psychology

Wiley Authors Win Nobel Prize in Physiology or Medicine for 2008

Hoboken, N.J., October 7, 2008 — John Wiley & Sons, Inc, is pleased to announce that the Nobel Assembly at Karolinska Institutet has awarded the Nobel Prize in Physiology or Medicine for 2008 to Prof. Harald zur Hausen and jointly to Prof. Françoise Barré-Sinoussi and Prof. Luc Montagnier.

"We are honored that all three Nobel laureates are part of our publishing community. We congratulate Prof. Harald zur Hausen, Prof. Françoise Barré-Sinoussi and Prof. Luc Montagnier for this recognition of their lifetime achievements which have changed the course of science and medicine, as well as the lives of human beings," said Mike Davis, Vice President and Managing Director, Life Sciences.

Prof. Harald zur Hausen, of Germany, receives the Nobel Prize in Physiology or Medicine for his studies of human papilloma viruses causing cervical cancer. He is Editor-in-Chief of the International Journal of Cancer, has contributed several articles to Wiley-Blackwell journals, and is the book author of Infections Causing Human Cancer.
There are 142 Titles in Veterinary Medicine

Veterinary Radiology & Ultrasound

Celebrating 50 years of publication in 2009!

Veterinary Radiology & Ultrasound

Official Journal of the American College of Veterinary Radiology, The European College of Veterinary Diagnostic Imaging, The European Association of Veterinary Diagnostic Imaging, and The International Veterinary Radiology Association

Edited by:
Donald E. Thrall

ISI Journal Citation Reports® Ranking: 2007: 41/133 (Veterinary Sciences)
Impact Factor: 1.053

Veterinary Radiology & Ultrasound is a bimonthly, international journal that maintains the highest feasible standard for publication of matters pertaining to veterinary imaging and allied disciplines, sustaining its recognition as an established refereed journal and serving as a source of continuing education. Published papers include results of original investigation, clinical reports, case-history reports and review articles.

Veterinary Radiology & Ultrasound is celebrating its 50th year as the only journal dedicated to Veterinary Imaging. Click here to read the Editorial "Fifty Years and Counting."

MAGNETIC RESONANCE IMAGING OF THE INITIAL ACTIVE STAGE OF EQUINE LAMINITIS AT 4.7T

JASON B. ARBLE, JOHN S. MATTOON, WM. TOD DROST, STEVEN E. WEISBRODE, PETER A. WASSENAAR, XUELIANG PAN, ROBERT J. HUNT, JAMES K. BELKNAP

Equine laminitis is a severely debilitating disease. There is a poor understanding of the underlying pathophysiology, and traditional imaging modalities have limited diagnostic capacity. High field strength magnetic resonance imaging (MRI) imaging allows direct visualization of the laminae, which other modalities do not. This would prove useful both in assessment of clinical patients and in further investigation into the pathophysiology of the disease. The objective of this study was to characterize the anatomic changes within the equine foot associated with the initial active stage of laminitis. Images obtained using a 4.7 T magnet were compared with digital radiographs using histologic diagnosis as the reference standard. Objective measurements and subjective evaluation for both modalities were evaluated for the ability to predict the histologic diagnosis in horses with clinical signs of laminitis as well as in clinically normal horses and horses that were in a population at risk for developing laminitis. Signal intensity and architectural changes within the corium and laminae were readily seen at 4.7 T, and there was a strong association with the histologic diagnosis of active laminitis. Measurements obtained with MR imaging were more sensitive and specific predictors of laminitis than those obtained radiographically. Subjective evaluation with MR imaging was more sensitive than with radiography and should become more specific with greater understanding of normal anatomy. Veterinary Radiology & Ultrasound, Vol. 50, No. 1, 2009, pp 3–12.

Key words: equine, laminitis, MRI.
MAGNETIC RESONANCE IMAGING FINDINGS OF DESMOPATHY OF THE COLLATERAL LIGAMENTS OF THE EQUINE DISTAL INTERPHALANGEAL JOINT

SANTIAGO D. GUTIERREZ-NIBEYRO, NATHANIEL A. WHITE II, NATASHA M. WERPY, LAURIE TYRRELL, KENT A. ALLEN, KENNETH E. SULLINS, RICHARD D. MITCHELL

We report the use of a low-field magnetic resonance (MR) imaging system for the detection of desmopathy of the collateral ligament of the distal interphalangeal joint and the long-term outcome. Twenty horses were studied and their medical records and MR images were reviewed retrospectively. Long-term follow-up information was obtained by telephonic questionnaires of owners, trainers, or referring veterinarians. Desmopathy of the medial collateral ligament (80%) and enthesopathy of the affected collateral ligament (80%) were common MR imaging features. Treatment consisted of stall rest followed by a rehabilitation period. Additional treatments included shoeing, extracorporeal shock wave therapy, application of a half limb or foot cast, and medication of the distal interphalangeal joint. Twelve (60%) horses returned to their previous level of exercise and maintained their previous level, whereas eight horses had a poor outcome. Low-field MR imaging in the standing patient can be used to detect collateral ligament desmopathy of the distal interphalangeal joint without a need for general anesthesia. Veterinary Radiology & Ultrasound, Vol. 50, No. 1, 2009, pp 21–31.

Key words: collateral ligaments, desmopathy, distal interphalangeal joint, equine, long-term outcome, low-field magnetic resonance imaging.

**Title** (Limit 50 words)

Motion-mode and Color Flow Doppler Ultrasonography Imaging for The Observation of Cardiovascular System Development on Fetal Feline (Felix catus)

**Running Head** (Limit 45 characters)

Ultrasonography of Cardiovascular System on Fetal Feline

**Abstract** (Limit 250 words)

The study was conducted to examine the feline fetal heart and vascular development by optimizing Motion-mode (M-mode) and Color Flow Doppler (CFD) visualization. Twelve queens were used in these studies which were previously mated before, then the mating date was used to determine the age of gestation. Fetal heart rate (FHR) was observed by using M-mode sonogram interpretation. In the other hand, the development of cardiovascular organ and blood flows was determined using CFD through the interpretation of it's changes in color flows level.

Dear Editor, Professor Donald E. Thrall
Enclosed is our manuscript entitled "Motion-mode and Color Flow Doppler Ultrasonography Imaging for The Observation of Cardiovascular System Development on Fetal Feline (Felis catus)", which we are submitting for consideration for publication in The Histochemical Journal as a Paper.

**Running Head** Ultrasonography of Cardiovascular System on Fetal Feline

**Abstract:** The study was conducted to examine the feline fetal heart and vascular development by optimizing Motion-mode (M-mode) and Color Flow Doppler (CFD) visualization. Twelve queens were used in these studies which were previously mated before, then the mating date was used to determine the age of gestation. Fetal heart rate (FHR) was observed by using M-mode sonogram interpretation. In the other hand, the development of cardiovascular organ and blood flows was determined using CFD through the interpretation of it's changes in color flows level. The correlation between feline FHR and gestation age was shown by using linear regression equation. The equation was $Y = 1.1023x + 218.77$, which Y is value of feline fetal heart rate and x is gestation age. Vascularization in uterine artery, placental and feline fetal heart was detected through CFD imaging at ≥ 14 days of gestation age. Vascularization of liver and stomach in abdominal region was detected at 21-26 days of gestation age. Vascularization of aorta, cranial region (cerebrum) and extremity were detected at 27-33 days of gestation age. The color intensity of vascularization on fetal organs that was detected by CFD was increased along with increasing of gestation age especially in the heart and the aorta.
Dear Editor, Professor Donald E. Thrall
Enclosed is our manuscript entitled "Motion-mode and Color Flow Doppler Ultrasound Imaging for the Observation of Cardiovascular System Development in Fetal Feline (Felis catus)", which we are submitting for consideration for publication in The Histochemical Journal as a Paper. Thank you for your assistance. I am the corresponding author.

Sincerely yours,
Deni Noviana
