Abstract

This report discusses the results of a study carried out in 8 provinces of Indonesia. The study evaluates the accomplishments of Applied Nutrition Programme (ANP) objectives, especially contributions of committed agencies and the effectiveness of methods used in the process of nutrition education to rural households. It also looks at the validity of ANP objectives, on the basis of past performance and nutrition problem solving processes, so that it may recommend how an improved strategy of ANP can make it an integral part of the overall Five-Year Development Plan. **KEYWORDS:** TROPAG | Food science | technology and nutrition | Human Biology and Nutrition | Home Economics | Development Trends and Analysis | Indonesia.
