COCOA POD TREATMENT

Previous Study

Simple chemical treatment
as effective as biological

Urea 20 g/kg FS gave the
highest digestibility

too high

Need adequate
available energy

matched supply

Need further study about
toxicity in more
physiological in vitro
model such rusitec

Objective

- investigating the effects urea treated cocoa pod inclusion in ruminant ration as barley substitution on methane release, SCFA production, N-metabolism, synthesis microbial Protein, rate of disappearance of DM and nutrients.
- The toxicity effect of high dose urea application on rusitec fermentation

Methods

Treatments: 6 rations

R1 : 10 g Hay

R2 : R1 + 4 g barley

R3 : R1 + 3 g barley + 1 g CPs

R4 : R1 + 2 g barley + 2 g CPs

R5 : R1 + 1 g barley + 3 g CPs

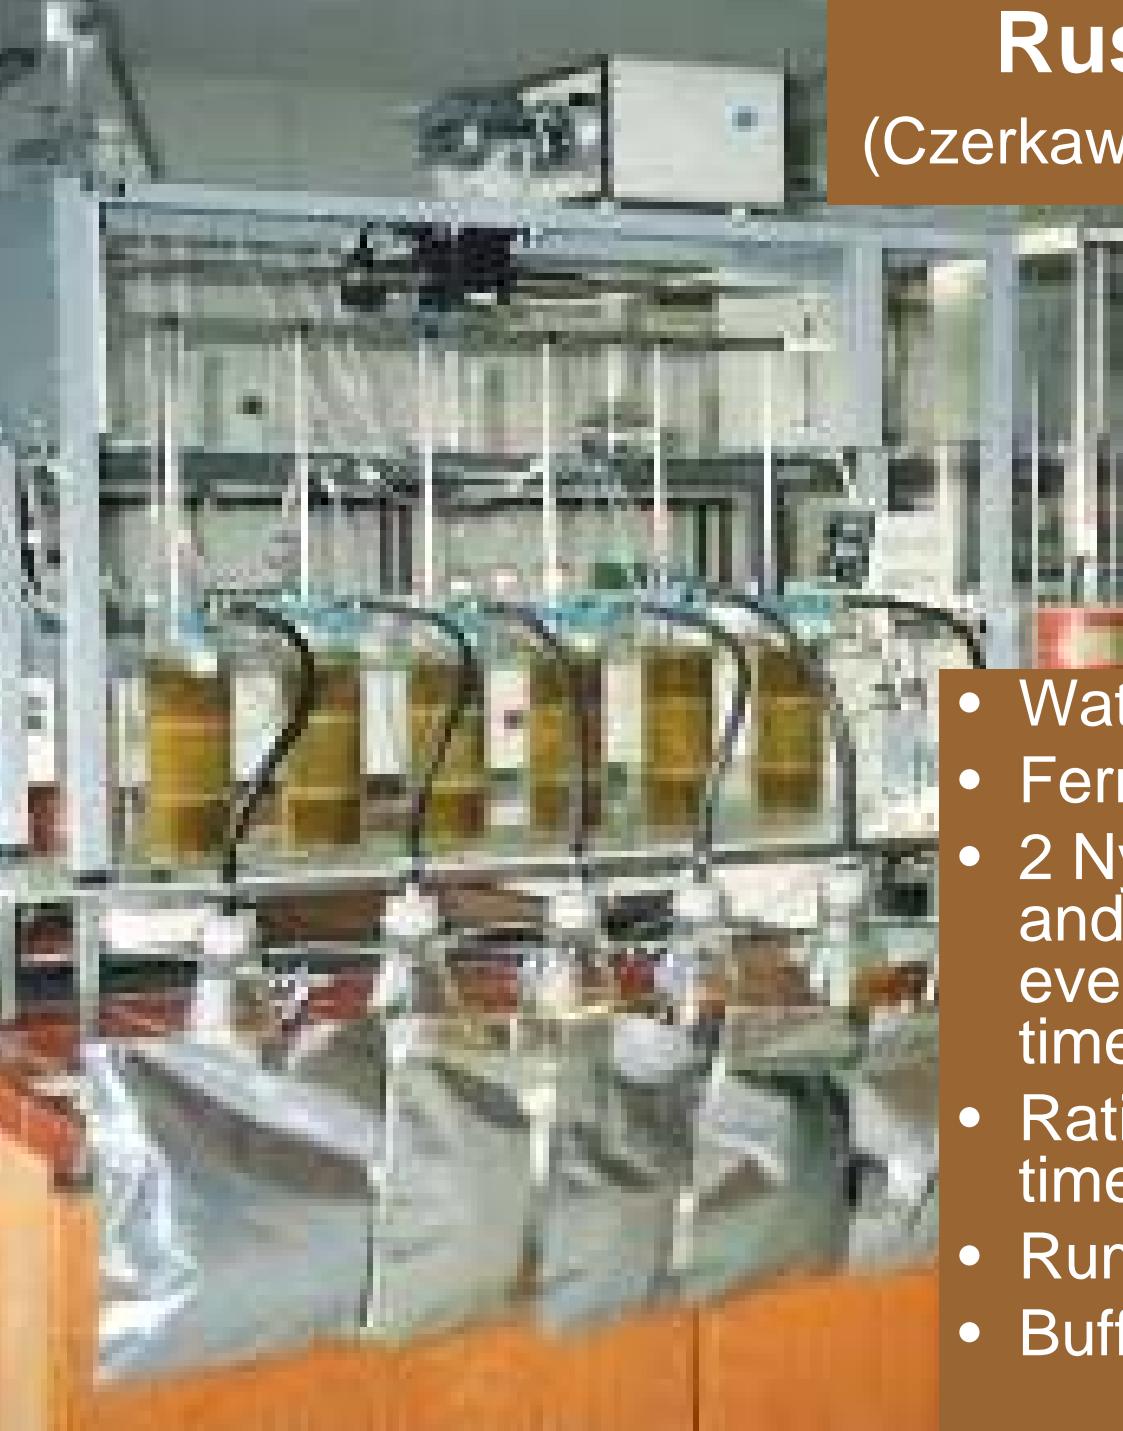

R6 : R1 + 4 g CPs

Rusitec Procedure

(Czerkawski & Breckenridge ,1977).

3 replications (runs)
6 fermenters for each run.
Each run lasted 14 days
9 days preliminary phase
5 days collecting phase.

Rusitec Procedure

(Czerkawski & Breckenridge ,1977).

- Water bath was set for 39 °C
- Fermenter Volume 1060 ml.
- 2 Nylon bag contained hay and concentrate introduced everyday with 48 h incubation time
- Ration stroke frequency = 400 time/h
- Rumen fluid as inoculum
- Buffer infusion rate 620 ml/d

Parameters

- pH
- Protozoal population
- CH₄
- NH₄⁺
- Short chain fatty acid (SCFA)
- Microbial protein synthesis (MPS)
- Rate of disappearance

Results

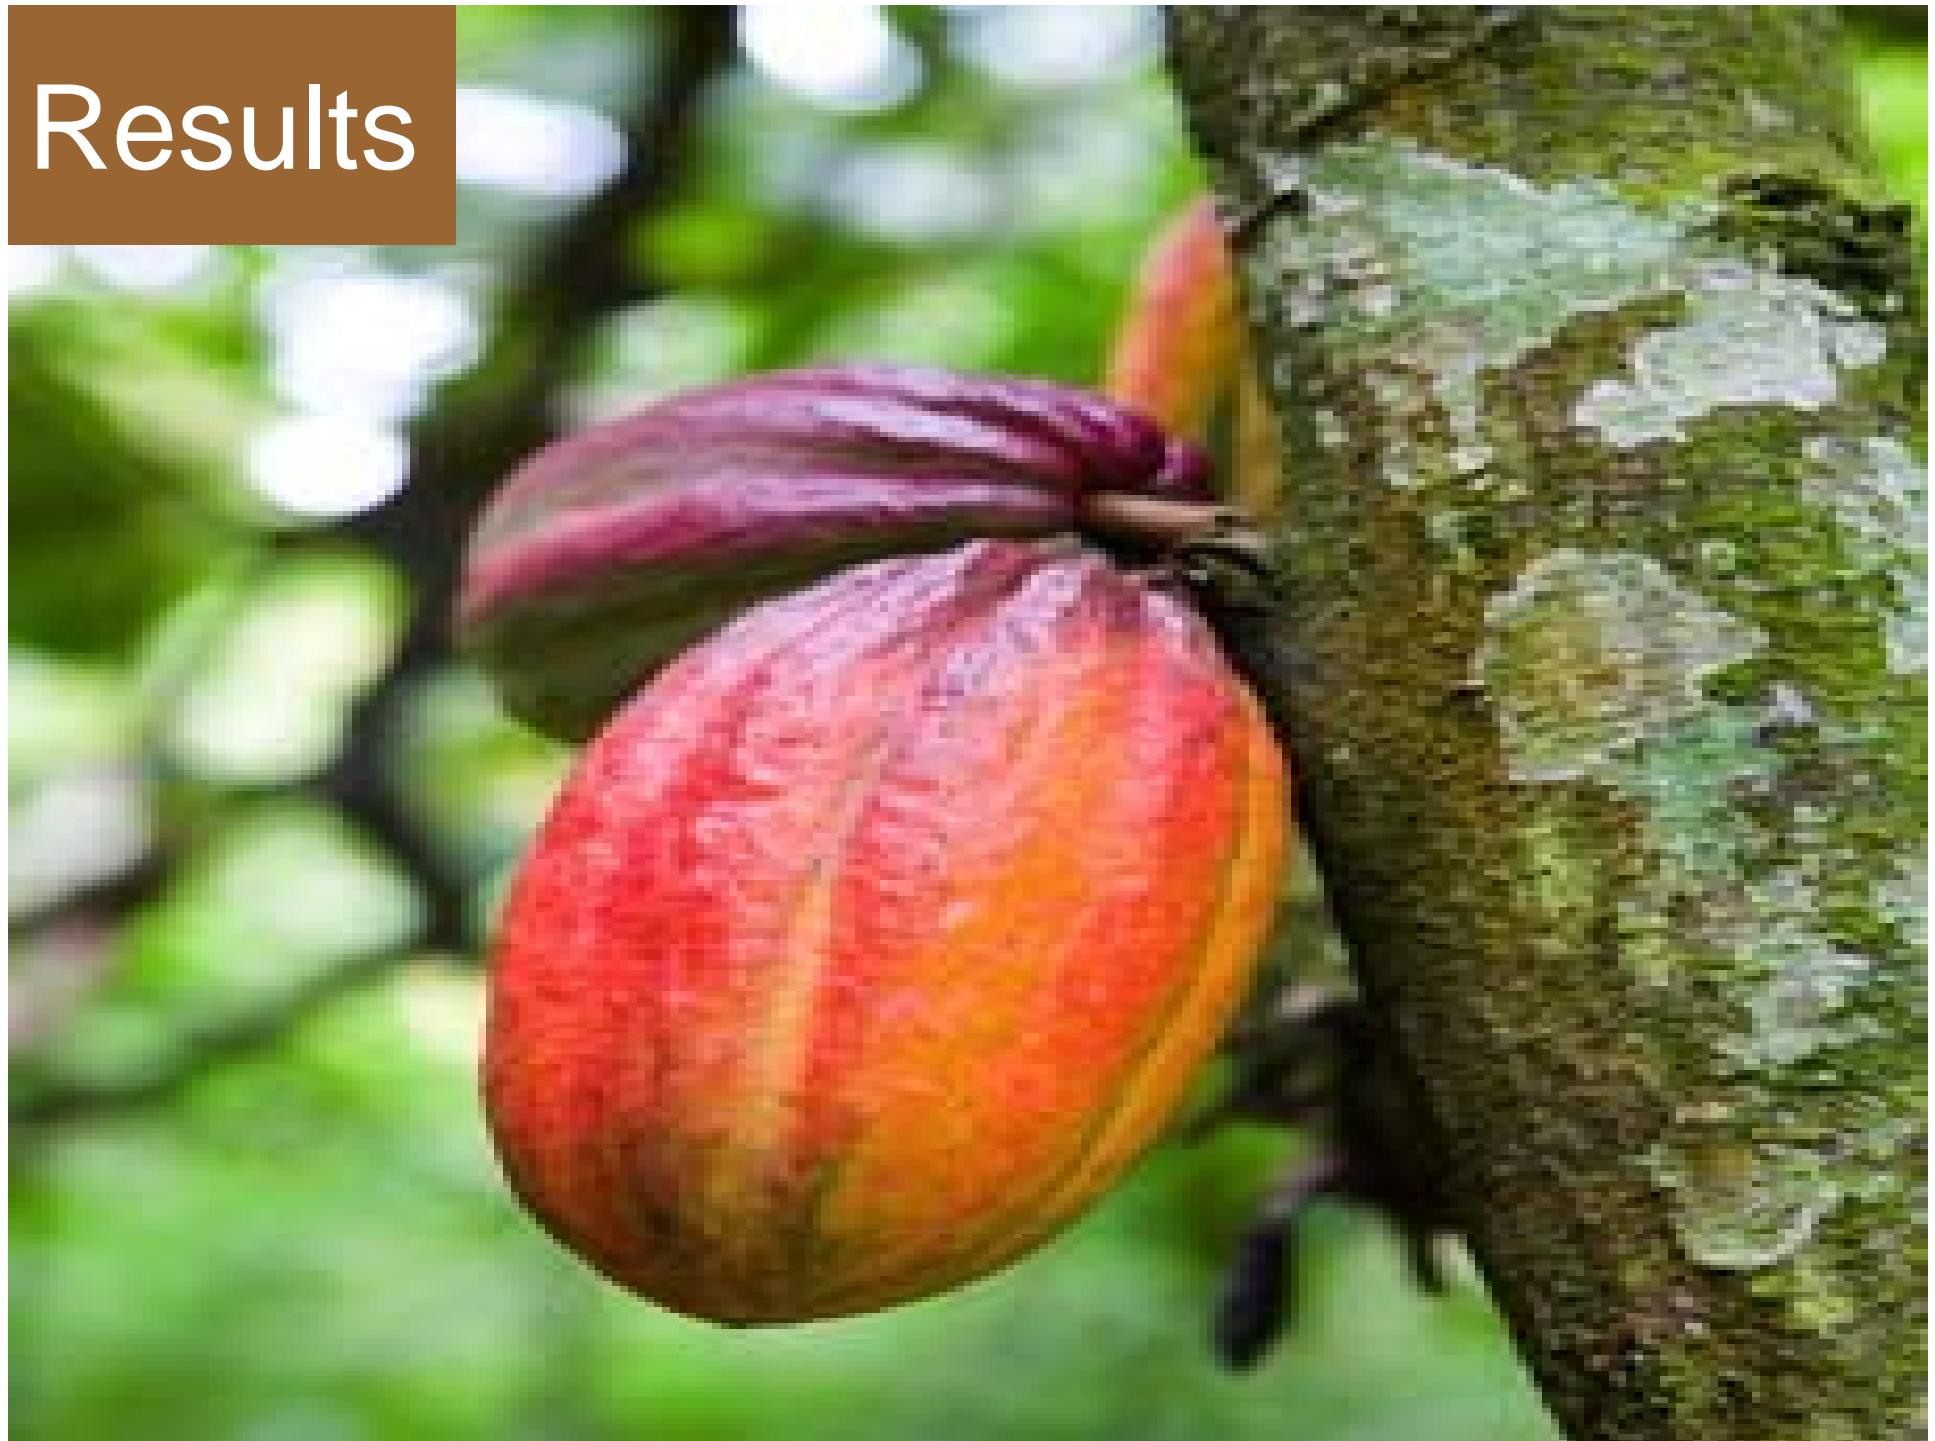

Table 3: Effect of replacing barley by urea treated cocoa pod on fermentation characteristics in Rusitec

Parameter	Treatment					
	T1	T2	T3	T4	T5	T6
PH	6.63 ^d	6.51 ^a	6.52 ^{ab}	6.54 ^b	6.59 ^c	6.63 ^d
Protozoa (cts/ml)	17475	17868	16310	14267	13672	12436
CH ₄ (mmol/d)	5.45 ^a	7.51 ^{de}	7.71 ^e	6.95 ^{cd}	6.38 ^{bc}	6.02 ^{ab}
NH ₄ ⁺ (mmol/l)	5.64 ^a	8.31 ^d	7.42 ^c	7.28 ^c	6.68 ^b	6.48 ^b

Table 3: Effect of replacing barley/soybean meal-mixture by urea treated cocoa pod on fermentation characteristics in Rusitec

Parameter	Treatment					
	T1	T2	T3	T4	T5	T6
SCFA (mmol/d)	24.88^a	35.61^b	33.59^b	31.94^{ab}	30.94^{ab}	28.78^{ab}

NDF	35.6	33.5	34.7	32.4	31.9	30.9

Table 6: Stoichiometry of fermentation in Rusitec

Parameter	Treatment					
	T1	T2	T3	T4	T5	T6
Microbial cell (MC) measured in Rusitec (mg/d)	700^a	859^c	822^{bc}	783^b	793^b	776^b
Microbial-N/OMAD (mg/g)	13.3 ^b	12.4 ^{ab}	11.9 ^{ab}	11.6 ^a	12.9 ^{ab}	12.5 ^{ab}
CH ₄ /OMAD (mmol/g)	1.29	1.37	1.40	1.29	1.28	1.23
CH ₄ /NDF disappearance (mmol/g)	2.86 ^{ab}	3.55 ^c	3.29 ^{bc}	2.97 ^{abc}	2.89 ^{ab}	2.42 ^a

- Urea treated cocoa pod cannot replace barley equivalently
 - Lower fermentation intensity (SCFA and Microbial)
- Can be used as a feedstuff for low performance ruminants without reducing the efficiency of microbial synthesis.
- No toxicity effects were observed with the inclusion of urea treated cocoa pod in the ration as to a dramatically disturbed fermentation or a too high concentration of ammonia.

Thank you
