LIST OF CONTENTS

PREFACE	iii
REPORT FROM ORGANIZING COMMITTEE.....	iv
WELCOME ADDRESS.....	v
OPENING REMARKS	vi
LIST OF CONTENTS.....	vii
PLENARY SESSIONS	
1 Feeding Strategies on Farms to Improve Livestock Productivity and Reduce Methane Production Metha Wanapat, Thiwakorn Ampapon, Chaowarit Mapato, Burarat Phesatcha and Bounnaxay Viennasay	1-9
2 Success Stories in Asia's Quest for Increasing its Domestic Milk Production John Moran, Geoff Walker and Mohammad Abdus Salam	10-19
3 The Use of Modern Technology for Production of Traditional Tropical Small Ruminants Liang Chou Hsia	20-23
4 Role of Livestock Production in Farm Households' Economy and Challenges in Perspective of Sustainable Development Vu Dinh Ton	24-32
5 Halal Life Style and Global Trade Tridjoko Wisnu Murti	33-39
6 Shelf-life Extension of Fresh and Processed Meat Products by Various Packaging Applications Keun Taik Lee	40-51
RUMINANT NUTRITION	
23306- Morphological Characteristics and Biomass Production of Chicory intybus in 45670- Yogyakarta	
1-SM Nafiatul Umami, Bambang Suhartanto, Ali Agus, Bambang Suwignyo, Nilo Suseno, Farrah Siti Zakkiyah, and Tim Cookson	52-56
24926- Effects of Different Season on Dominant Spesies and Chemical Composition 50679- Tropical Agricultural Weeds	
2-SM Bambang Suwignyo, Bambang Suhartanto, Briyan Ahmad Suparja, Wahyudin, and Galih Pawening	57-61

25003-50433-1-SM	The Evaluation of Wafer Feed Supplement Containing Leucaena Leaf on Pasundan Calves Y. Retnani, S. Suharti, L. Khotijah, I. Prihantoro, Taryati, Herni, and D. Argadyasto	62-67
24480-48720-1-SM	Incremental Level of <i>Chromolaena odorata</i> in Complete Diet for a Cows Fattening G.F. Bira, M.L. Mullik, and Dahlanuddin	68-72
24745-49263-1-SM	<i>In Vitro</i> Degradation and Rumen Fermentation Characteristics of Soybean Meal Protected with Different Levels of Formaldehyde Wulandari, Budi Prasetyo Widyobroto, Cuk Tri Noviandi, and Ali Agus...	73-78
24719-49108-1-SM	Characteristic Comparison of BMR and Conventional Sorghum as Promising Forage Grown on Ultisol Soil Applied Different Levels of Organic Fertilizer Widhi Kurniawan, Astriana Napirah, Rahman, Luki Abdullah, and Supriyanto	79-84
24713-49288-1-SM	Chemical Composition and <i>In Sacco</i> Degradation of Fish Waste Meal as Alternative Protein Feed Source Maurinda Safitri, Cuk Tri Noviandi, and Ristianto Utomo	85-89
24474-48205-1-SM	Interaction of Fertilizer, Light Intensity and Media on Maize Growth in Semi-Hydroponic System for Feed Production Nur Rochmah Kumalasari, Asep Tata Permana, Riry Silvia and Anggia Martina	90-96
24778-49582-1-SM	The Effect of Alfalfa Meal Supplementation in Concentrate on Feed Digestibility of Ettawa Crossbred Goat Chusnul Hanim, I Gede Suparta Budisatria, and Retnowati Diah Pratiwi	97-102
23593-46215-1-SM	The Inclusion Effects of Indigofera zollingeriana in Oil Palm Fronds Based Diet on Rumen Fermentation Kinetics and Microbial Yields In Vitro S. Fakhri, A. Jayanegara, and Yurleni	103-106
24618-49103-1-SM	Fermentation Characteristics of Corn Stover and <i>Gliricydia sepium</i> Combination Silage with Different Presentations Trisna Ayuni, Widhi Kurniawan, Astriana Napirah, and Rahman	107-111
24704-49268-1-SM	The Effect Additional of Sodium Carbonate as Buffer in Utilization of Tofu Byproduct Lactic Acid Bacteria Fermentation as Basal Ration on Rumen Fermentation Bligon Goat During Lactation Farkhan Ihsani, Zaenal Bachruddin, Cuk Tri Noviandi and Lies Mira Yusiati	112-116

23346-45811-1-SM	Nutritional Value and In Vitro Digestibility of Shrimp Waste Fermented with <i>Isoptericola</i> sp. A10-1 Amrih Prasetyo, Lies MiraYusiati, Yuny Erwanto, Wihandoyo, Nanung Agus Fitriyanto, and Rusman	117-121
23570-46141-1-SM	<i>In Vitro</i> Nutrients Digestibility of the Combination <i>Titonia (Tithonia diversifolia)</i> and Napier Grass (<i>Pennisetum purpureum</i>) Novirman Jamarun, Elihasridas, Roni Pazla, and Fitriyani	122-127
25268-51252-1-SM	The Effect of Cumin (<i>Cuminum cyminum</i>) Addition as Source of Essential Oils on Nutrien Digestibility, VFA, Amonia and Methan Production Asih Kurniawati, Widodo, Wayan T. Artama, and Lies Mira Yusiati	128-132
25555-52329-1-SM	<i>Calliandra calothyrsus</i> as Tannins Source for In Vitro Methane Production Inhibitor Agents Muhlisin, M. A. Anas, C. Hanim, and L. M. Yusiati	133-136
28128-62294-1-SM	Effect as Feed Supplement Wafer the Nutrient Consumption and Digestibility of Pasundan Cattle Herni, Y. Retnani, and S. Suharti	137-142
28127-62292-1-SM	Nutrient Composition and In Vitro Digestibility of <i>Brachiaria decumbens</i> Cv. <i>Basilisk</i> With Different Level of Fertilizer Nafiatul Umami, Adib Norma Respati, Bambang Suhartanto, and Nilo Suseno	143-146
24928-50085-1-SM	In Vitro Gas Production of Lemongrass Leaves as Essential Oil Source and its Effect on the Kinetics of Gas Production Insani Hubi Zulfa, Asih Kurniawati, and Supadmo	147-151
24731-49416-1-SM	Effects of Carbon:Nitrogen Ratio On Quality of <i>Chromolaena odorata</i> Silage Marthen L. Mullik, Gustaf Oematan, Twen Dami Datto, Bambang Permana, Yelly M. Mulik	152-155
24755-49518-1-SM	<i>In Vitro</i> Digestibility of Timor-Leste Native Grass Supplemented with <i>Leucaena leucephala</i> and <i>Corypa elata Robx</i> Luis T, Endang Baliarti, Cuk Tri noviandi and Tri Satya Mastuti Widi ..	156-160
23345-45812-1-SM	Nutrient Intake and Digestibility of Kacang Goat Received Rations Containing Solid Waste of Herbal Industry Arif Nindyo Kisworo, Ali Agus, Kustantinah, and Bambang Suwignyo ...	161-166
22373-42263-2-SM	The Effect of Gamma Irradiation on Nutrient Profiles and Total Gas Production In Vitro of Two Sorghum Straw Variety Teguh Wahyono, Shintia NW Hardani, and Suharyono	167-171

23316-45667-1-SM	The Effect of Rhizobium Inoculation and Harvesting Time on the Quality and Biomass Productivity of Peanut Straw (<i>Arachis hypogea</i>) in Sandy Soil Nafiatul Umami, Bambang Suhartanto, Ristianito Utomo, Putri Dwinda Heristiningrum.....	172-177
25248-51206-1-SM	Feed Evaluation based on Tannin Content and Gas Production of Twelve Tropical Feedstuffs Kustantinah Adiwimarta, Edwin Indarto, Zuprizal, Cuk Tri Noviandi, Nanung Danar Dono, and Fajar Aji Mukti.....	178-184
27713-58262-1-SM	The Effect of Starter Addition on Digestibility Value of Complete Feed Fermentation-Based Kumpai Minyak grass (<i>Hymenachne amplexicaulis</i>) Anggriawan N.T.P, Andriyani Astuti, Ristianito Utomo, and Subur Priyono Sasmito Budi.....	185-188
24723-49338-1-SM	Digestibility and Ruminant Fermentation Characteristic of Native Grass Silage Supplemented with Different Levels of <i>Leucaena leucocephala</i> Ryan Aryadin Putra, Cuk Tri Noviandi, and Nafiatul Umami.....	189-195
23708-46255-1-SM	Quality of Sorghum Silage Fermented with Starch of Gebanga Flour (<i>Corypha gebanga</i>) and Lactic Acid Bacteria as Additives Lilo J. M. Christna Kale Lado, Ristianito Utomo, Cuk Tri Noviandi, and Nono Ngadiyono.....	196-199
24980-49226-1-SM	Physical Characteristics Evaluation of Kumpai Minyak Grass (<i>Hymenachne amplexicaulis</i>) Silage Nur Muhammad, Andriyani Astuti, Ristianito Utomo, and Subur Priyono Sasmito Budi.....	200-204
24809-49652-1-SM	<i>In Vitro</i> Digestibility of Fermented Rice (<i>Oryza sativa</i>) Straw and Cassava (<i>Manihot utilissima</i>) Leaves Basal Feed Supplemented with Cassava Tuber Cuk Tri Noviandi, Ristianito Utomo, and Zazin Mukmila	205-208
24889-49944-1-SM	Physical and Organoleptic Quality of Pellet with Differences Tuber Type as Binder Andriyani Astuti, Chusnul Hanim, and Hanivan Akil.....	209-215
23745-62294-1-SP	<i>In vitro</i> Digestibility and Gas Production Characteristics of Four <i>Brachiaria</i> Cultivars as Fresh Fodder Dewi Ratih Ayu Daning and Riyanto.....	216-222
MONOGASTRIC NUTRITION AND PRODUCTION		
23366-45870-1-SM	The Effect of Daily Activities Stingless Bees of <i>Trigona</i> sp. on Honey Production Agussalim, Ali Agus, Nafiatul Umami, and I Gede Suparta Budisatria....	223-227

24605-49049-1-SM	Effect of Utilization of Maggot (<i>Hermetia illucens</i>) Meal Substituted Fish Meal in the Diets on Broiler Chicken Performance J. F. Umboh, M. Najoan, F. N. Sompie, B. Bagau, and M. Imbar	228-234
24616-49078-1-SM	The Use of Nano-Encapsulation of <i>Morinda citrifolia</i> Fruit Extract in Drinking Water as Phytobiotic Based Feed Additive in Laying Hens Zainal Choiri, Nanung Danar Dono, Chusnul Hanim, Bambang Ariyadi, and Zuprizal	235-239
23617-46256-1-SM	Utilization of Skin of Mung Bean Sprouts for Weaning Rabbits Haryati T, Soewandi B. D. P., and Raharjo Y	240-243
23648-46343-1-SM	Production of Chicken Carcass and Non Carcass of Kampung Chickens Who Received Rations Skin Dragon Fruit Flour (<i>Hylocereus polyrhizus</i>) Fermented Gusti A.M. Kristina Dewi, I M. Nuriyasa and I W. Wijana	244-250
24936-50006-1-SM	The Effect of Dietary Violet Roselle Flower and Moringa Leaves Meal Supplementation on Blood Profile of Broiler Chickens Akyas Manjanig, Nanung Danar Dono, and Wihandoyo	251-255
24987-49939-1-SM	Growth Performances of Broiler Chicken Fed on Diets Supplemented with Graded Levels of Neem Leaf Meal K.G. Wiryawan, S. Pratama and Sumiati	256-259
24924-50074-1-SP	Effects of Dietary Turmeric and Red Ginger Meal on Broiler Chickens Performance in Tropical Area Etha 'Azizah Hasiib, Edi Suryanto, and Nanung Danar Dono	260-265
25169-51030-1-SM	Genetic Parameter Estimation on Pra Production Traits of Alabio and Mojosari Ducks After Selection Based on Egg Production in Two Generation Jafendi H. Purba Sidadolog, Isti Damayanti, Tohir, Dyah Maharani and Tety Hartatik	266-275
24947-50036-1-SM	Effect of Using Jackfruit Leaf (<i>Artocarpus heterophyllus</i>) as Disinfectant on Decreasing Number and Genus of Fungi in Poultry Incubator Hidayati, Y.A., E. T. Marlina., and D.Z. Badruzzaman	276-279
23556-46115-1-SM	Effects of Sago Waste as Local Feed Resource That Gives Cellulose Enzyme in Feed on Carcass and Organ Characteristics of Broiler Chickens Deki Zulkarnain, Zuprizal, Wihandoyo and Supadmo	280-285
23738-46773-1-SM	Effects of a Natural Preparation Based on Kaolin, Olive Leaf, Turmeric and Mild Paprika on the Performance of Laying Hens D. Ouachem and S. Lombarkia	286-293

ABSTRACT

This experiment aimed to analyze the potency of sweet potato biomass as a local feed resource for substituting concentrate feed in supporting the performance of local thin tailed sheep. The experimental design was completely randomized block design (3 x 3) using 9 sheep of 9-12 months old with average body weight of 14.34 ± 1.32 kg. They were placed in individual metabolic cage provided with buckets for feed and drinking water. Feeding level was 3.5% of their body weight on dry matter basis and given at 0630 and 1600. Drinking water was provided ad libitum. The treatments were T1 (70% Napier grass + 30% concentrate), T2 (50% Napier grass + 50% sweet potato veins), and T3 (70% sweet potato veins + 30% sweet potato tubers). Parameters measured were feed/nutrients intake, feed digestibility, body weight gain, and feed efficiency. Data were analyzed using analysis of variance and any significance different results were further tested using Duncan's multiple range test. The results showed that feed intake, feed digestibility, body weight gain and feed efficiency were significantly affected by the treatment ($P < 0.05$). Daily gain and feed efficiency of sheep in T1 group (70% Napier grass + 30% concentrate) were not significantly different ($P < 0.05$) from those in T3 (70% sweet potato veins + 30% sweet potato tubers). Sweet potato biomass, a local cheap feed, can be used as a substitute for expensive concentrate feed.

Keywords: Concentrate feed, Performance, Sheep, Sweet potato biomass

INTRODUCTION

Sheep farming business in Indonesia is currently dominated by smallholder farms with a relatively small scale of about 3 to 8 heads of sheep per family. Lack of knowledge of good sheep farming practice of the farmers is the main factor affecting low productivity of sheep, especially in the case of feeding. The farmer only provides forage they can get without taking into account the nutritional needs of the sheep. This will be more severe especially during the dry season where availability and quality of forage are low. Commercial (concentrate) feed prices are too expensive for farmers. This results in low livestock performance. Therefore, it should be sought alternative feed that is cheap, easy to obtain but has good quality.

For sheep farmers in Bogor one alternative feed that can be used is the biomass of sweet potatoes. This plant is favored by farmers to be planted because it is easy to manage, relatively resistant to drought, besides it can grow on various types of soil. According to BPS (2014) sweet potato production in Indonesia was 2,382,025 tons, while in West Java 471,737 tons and in Bogor the production was 82,935 tons. Sweet potato tubers are usually sold to the

market with a fairly cheap price around Rp 1,000 to Rp 1,400. Sweet potato veins that are agricultural waste have been widely used by the farmers to feed the sheep. Sweet potato veins can be used as a protein source, it contains crude protein of 19.29% (Sutardi, 1979). Provision of sweet potato veins alone cannot meet the energy needs of sheep. This can be fulfilled by sweet potato tubers with a TDN content of 83.9%. The use of veins and tubers was expected can meet the needs of energy and protein of sheep, so it is expected will improve the performance of sheep in order to achieve production efficiency. However, the tubers are rarely used as sheep feed by the farmers.

This study aimed to evaluate the digestibility of feed and the performance of Thin-Tailed Sheep (Javanese Thin-Tailed) fed with sweet potato biomass (*Ipomoea batatas*) in the form of veins and tubers.

MATERIALS AND METHODS

This experiment was conducted in field laboratory of Department of Nutrition and Feed Technology and chemical analysis was conducted at the laboratory of Research Center for Biological Resources and Biotechnology of Bogor Agricultural University. Nine sheep of 9 - 12 months old with average body weight of 14.34 ± 1.32 kg were allocated into completely randomized block design incorporating three treatments and three replicates. Sheep were reared for 16 weeks consisted of two weeks of adaptation period and 14 weeks of measuring period. They were placed in individual metabolic cage provided with buckets for feed and drinking water. Feeding level was 3.5% of their body weight on dry matter basis and given at 0630 and 1600. The nutrient content of experimental diets was shown in Table 1. Drinking water was provided *ad libitum*. The treatments were T1 (70% napier grass + 30% concentrate), T2 (50% napier grass + 50% sweet potato veins), and T3 (70% sweet potato veins + 30% sweet potato tubers). Variables measured were feed/nutrients intake, feed digestibility, body weight gain, and feed efficiency. Data were analyzed using analysis of variance and any significance different results were further tested using Duncan's multiple range test (Steel and Torrie, 1980).

Table 1. Nutrient content of experimental diets

Nutrients	Treatments		
	T1	T2	T3
Dry matter (%)	42.02	18.03	18.44
Crude protein (%)	11.88	13.20	13.66
Ether extract (%)	5.76	6.35	5.57
Crude fibre (%)	22.00	21.28	11.84
Nitrogen free extract (%)	50.24	46.71	58.91
Ash (%)	13.12	12.72	10.36
TDN (%)	58.21	62.29	74.16

T1: 70% Napier grass + 30% concentrate, T2: 50% Napier grass + 50% sweet potato veins, T3: 70% sweet potato veins + 30% sweat potato tuber. TDN: total digestible nutrient

RESULTS AND DISCUSSION

Nutrient Intake

Intakes of nutrients were shown in Table 2. The treatment had a significant effect on the consumption of dry and organic matter ($P < 0.05$). Treatment of T1 and T2 had dry and organic matter consumption which was not significantly different, whereas treatment (T3) had the lowest dry and organic matter consumption. The main reason that the animal to consume the feed is to meet the energy needs for his body. Therefore, low dry matter consumption of T3 may be caused by the higher its energy content than those of other treatments.

Table 2. Nutrient intakes (g/kg BW/day) of sheep during experiment

Nutrients	T1	T2	T3
Dry matter	33.44 ± 0.30 ^b	33.08 ± 0.13 ^b	29.72 ± 0.22 ^a
Organic matter	29.04 ± 0.26 ^b	28.87 ± 0.16 ^b	26.64 ± 0.19 ^a
Crude protein	2.98 ± 0.02 ^a	4.25 ± 0.01 ^c	4.01 ± 0.03 ^b
Crude fibre	7.26 ± 0.06 ^c	7.15 ± 0.03 ^b	3.51 ± 0.02 ^a
Ether extract	1.93 ± 0.01 ^b	2.07 ± 0.00 ^c	1.65 ± 0.01 ^a
Nitrogen free extract	18.85 ± 0.15 ^c	15.39 ± 0.06 ^a	17.42 ± 0.12 ^b
TDN	19.53 ± 0.17 ^a	20.45 ± 0.07 ^b	22.04 ± 0.16 ^c

T1: 70% Napier grass + 30% concentrate, T2: 50% Napier grass + 50% sweet potato veins, T3: 70% sweet potato veins + 30% sweet potato tuber

Different superscripts in the same row show significant differences ($P < 0.05$)

The treatment significantly ($P < 0.05$) affected crude protein (CP) consumption. Sheep fed sweet potato veins (T2 and T3) have higher protein intake than that of sheep fed without sweet potato veins feed (T1). This because sweet potatoes veins contain high protein (18.42%). In this study, crude protein consumption of sheep ranges from 2.98 to 4.25 g/kg BW/day indicated the protein requirement of sheep had been fulfilled. According to Kearn (1982) the minimum protein requirement for sheep weighing 10 to 20 kg with weight gain of 0 to 100 g/day ranged from 2.6 to 3.6 g/kg BW/day.

The treatments had significant effect ($P < 0.05$) on the consumption of crude fiber. Sheep fed T1 feed (70% napier grass + 30% concentrate) had higher ($P < 0.05$) crude fiber consumption compared with T2 treatment. Elephant grasses have a high crude fiber content (26.9%), so the more elephant grass in the ration causes the higher consumption of crude fiber. Group T3 feed (70% sweet potato veins + 30% sweet potato tuber) had the lowest crude fiber consumption value. This is because the crude fiber content of T3 feed was also the lowest. Treatment had significant ($P < 0.05$) effect on ether extract (EE) consumption. The pattern of EE consumption was in line with the EE content of the ration. Sheep fed T2 diet, which had the highest dietary EE content, also had the highest EE consumption followed by T1 and T3 groups, respectively.

Treatment had significant effect ($P < 0.05$) on the consumption of free extract nitrogen (NFE). NFE consumption of sheep given T1 is highest ($P < 0.05$) followed by T3 and T2. This is because T1 and T3 treatments use high carbohydrate source feeds that are concentrates and sweet potato tubers. The treatment also had significant effect ($P < 0.05$) on energy consumption (TDN). In accordance with the TDN content of each diet, T1-fed sheep consumed a lower TDN compared to sheep fed T2 and T3, each of which was given veins of and biomass of sweet potato, respectively.

Dry matter digestibility (DMD) and organic matter digestibility (OMD)

The treatment significantly affected ($P < 0.05$) percentage of dry matter and organic matter digestibility. The digestibility of dry matter and organic matter of feed is presented in Table 3.

Table 3. Feed digestibility and efficiency and daily gain of sheep

Variables	T1	T2	T3
DMD (%)	72.04 ± 3.42 ^a	69.29 ± 1.33 ^a	79.91 ± 1.87 ^b
OMD (%)	70.76 ± 3.58 ^a	68.58 ± 1.36 ^a	80.07 ± 1.86 ^b
Daily gain (g/day)	69.14 ± 6.19 ^b	40.25 ± 16.71 ^a	70.57 ± 17.08 ^b
Feed efficiency	0.11 ± 0.01 ^{ab}	0.08 ± 0.02 ^a	0.14 ± 0.03 ^b

T1: 70% Napier grass + 30% concentrate, T2: 50% Napier grass + 50% sweet potato veins, T3: 70% sweet potato veins + 30% sweet potato tuber. DMD: Dry matter digestibility, OMD: Organic matter digestibility
 Different superscripts in the same row show significant differences ($P < 0.05$)

The digestibility of dry matter and organic matter in this research were 69.29 - 79.91% and 68.58 - 80.07%, respectively. Dry matter and organic matter digestibility on T3 treatment (70% of sweet potato veins and 30% sweet potato tuber) were higher than other treatments. This is due to the low crude fiber content in the T3 feed treatment compared to other treatments. Cell walls in forage plants containing lignin will inhibit the action of rumen microbes in degrading crude fiber. T1 treatment had dry matter digestibility value and organic material which is not different from that of T2 treatment. Rianto *et al.* (2006) reported lower values of DMD and OMD in male thin tailed sheep than the results of this study, i.e., 58.02 - 68.28% and 60.81 - 71.13%, respectively. While higher digestibility of feed was reported by Aprianto (2013) with 60% of elephant grass and 40% concentrate feed that is DMD was 80.51% and OMD was 81.94%. The digestibility value is not fixed for every food or every livestock, but it is influenced by several factors, such as the chemical composition of feed material and the physical form of feed (McDonald *et al.*, 2002). High dry matter and organic matter digestibility can increase nutrient absorption, so that more nutrients can be used to meet the nutritional needs of livestock for maintenance and production (Arora, 1986).

Daily gain and feed efficiency. The daily weight gain of sheep during the study was presented in Table 3. The treatment had significant effect ($P < 0.05$) on daily weight gain of sheep. In general, feeds that have high nutrient content, high levels of digestibility and good palatability can increase more quickly the weight gain of sheep during rearing period.

Sheep fed T3 diet had the highest daily gain (71 g/head/day) which was not significantly different from that of the sheep fed T1 diet (69 g/head/day). While the lowest daily gain was in T2 diet treatment (40 g/head/day). Sheep fed T3 treatment (70% of sweet potatoes veins and 30% of tubers) had the highest daily gain due to the adequacy of crude protein content in sweet potato veins along with the high energy in the tubers, and also its highest OM and DM digestibility. The lowest weight gain in the T2 treatment compared to other treatments was probably due in part to the lower dry matter and organic matter digestibility in T2 treatment compared with other treatments. So that only a few nutrients can be absorbed and utilized by the body for weight gain.

The treatments had significant effect ($P < 0.05$) on the efficiency of feed utilization. The higher the value of feed efficiency indicates better feed use in increasing the growth of animal. The feed efficiency values in this study were 0.14, 0.11, and 0.08 for the treatments of T3, T1, and T2, respectively. Sheep fed diet T3 treatment despite having low feed intake, but because the feed has the highest energy content with the lowest crude fiber and high

digestibility of organic and dry matter so that nutrients were absorbed in large quantities for the highest weight gain. Pond *et al.* (1995) stated that the more efficient feed used for weight gain showed better feed quality and lower feed conversion.

CONCLUSIONS

Giving the combination of 70% veins and 30% sweet potato tubers (T3) is able to provide nutritional adequacy and support good sheep performance, and can be used as an alternative feed for concentrate substitutes.
